RE: Site Inspection, M/049/011, Larson Limestone Quarry

On May 10, 1988 Jerry Mansfield of State Lands and I stopped at the Larson Limestone Quarry. I talked with Ferrel Larson (Jerry Larson's brother) about future drilling and blasting at the quarry. The Larson's would like to quarry an area on the South end of the Site by drilling and blasting later this summer. The area would be less than five acres. I told Mr. Ferrel that he should file a Small Mine Notice for this area and that a variance for highwalls and for roads to be left after mining should be requested. I felt that the crushing and screening operation on the north end of the site should be left off of the notice until such time that the loose rock aggregate material in the area is no longer the primary feed for the crusher.

The Larsons have a state Lease just to the north of the crusher area. They have no immediate plans to mine this area, but they have allowed another contractor to store his equipment on this site. Ms. Pauline Pugh has complained that this equipment is on her state Lease which is contiguous with the Larson Limestone Lease. Jerry Mansfield determined that this was not the case and that the equipment is completely on the Larson Lease. (STATE OF LAURE)

I emphasized to Ferrel that we would like the site to be kept as clean as possible during operations and that the flatter areas should be reclaimed after mining is completed in an area.
